What This Is

The Operations Command Center is a live map of the Phoenix Metro that shows every active job in JobTread, every lead in the GoHighLevel sales pipeline, all nine service zones, and every supplier location we use — all in one place. It refreshes overnight so it always reflects current data.

Reading the Map

Job & Lead Pins

Symbol	Color	Meaning
● Circle	Teal	JobTread — Active Production (job underway)
● Circle	Blue-green	JobTread — Sold / Project Intake (sold, not yet active)
◆ Diamond	Orange	GHL — Appointment Booked
◆ Diamond	Yellow	GHL — Consultation Completed
◆ Diamond	Bright Yellow	GHL — Proposal Sent
◆ Diamond	Red	GHL — Permitting

Hover over any GHL Appointment Booked pin to see the scheduled date and time. **Click** any pin to open a popup with the full details — name, address, service zone, status, and a direct link to open that record in JobTread or GoHighLevel.

Service Zones

The shaded polygons across the map represent our nine service zones (Z1 through Z5B). Every job and lead popup tells you which zone that address falls in.

Filtering the Map

Use the **filter chips** along the top toolbar to show or hide specific categories:

- **JT ▼** — toggles all JobTread jobs on/off. Click individual chips (Active, Sold / Intake) to filter by status.
- **GHL ▼** — toggles all GHL pipeline leads on/off. Click individual chips to filter by stage.

- **Zone chips (Z1, Z2A, etc.)** — click any zone chip to show only pins within that zone.
-

Using the Search Bar

Type any of the following into the search bar at the top of the map:

- **A supplier name** (e.g., “SiteOne”, “Floor & Decor”, “Aquatec”) — the map flies to that pin and highlights it.
 - **A job name or client name** — flies to that job or lead pin.
 - **A street address** — geocodes the address, drops a pin, and tells you which service zone it falls in. Use this to quickly zone-check any address a customer or subcontractor gives you.
-

Supplier Layers

The right-hand panel lists all supplier categories. Each is **OFF by default** to keep the map clean. Toggle any layer ON to show those locations as pins.

Icon	Meaning
★ Gold Star	Showroom — walk-in, client-facing, product displays
◆ Diamond	Supply / Distribution — contractor pickup, not a showroom
💧 Water Drop	Pool & Fountain supplier

All ON / All OFF buttons at the top of the panel toggle every supplier layer at once.

Weather Overlay

The **precipitation radar** is on by default. It shows live rain and storm coverage across the service area. Use it to check conditions before dispatching crews or scheduling outdoor work. Toggle it off using the **Radar ON/OFF** button at the bottom of the right panel if it’s in the way.

Dashboard

The **Live Dashboard** (upper left) shows a real-time count of jobs and leads by category:

- **Active Production** — jobs currently being built
 - **Sold / Intake** — sold jobs in pre-construction
 - **GHL Pipeline** — leads by stage (Appt Booked, Consultation, Proposal, Permitting)
 - **Total on Map** — combined count of everything currently visible
